The invention also relates to novel E. ruminantium polynucleotides and their corresponding proteins. Sequences of the invention are useful for inducing immunity, particularly protective immunity. They are also useful for detecting the presence of E. ruminantium in a biological sample. They are useful in vaccines for protecting animals or humans against rickettsial diseases, e.g. typhus, spotted fever or heart water. Sequences of the invention are useful for detecting antibodies to pathogens. The present sequence is a DNA encoding Ehrlichia ruminantium hypothetical glycerol 3-phosphate dehydrogenase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 4750 BP; 1835 A; 876 C; 496 G; 1543 T; 0 U; 0 Other;

Sequences of the invention are useful for inducing immunity, particularly protective immunity. They are also useful for detecting the presence of E. ruminantium in a biological sample. They are useful in vaccines for protecting animals or humans against rickettsial diseases, e.g. typhus, spotted fever or heart water. Sequences of the invention are useful for detecting antibodies to pathogens. The present sequence is a DNA encoding E. ruminantium nitrogen assimilation regulatory protein (19hworf3)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 1416 BP; 472 A; 297 C; 161 G; 486 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                           immunity to rickettsial infection, including Ehrlichia ruminantium (formerly Cowdria ruminantium). The invention also relates to novel E. ruminantium polynucleotides and their corresponding proteins. Sequences of the invention are useful for inducing immunity, particularly protective immunity. They are also useful for detecting the presence of E. ruminantium in a biological sample. They are useful in vaccines for protecting animals or humans against rickettsial diseases, e.g. typhus, spotted fever or heart water. Sequences of the invention are useful for detecting antibodies to pathogens. The present sequence is a DNA encoding E. ruminantium hypothetical cell division protein (ftsQ; 19hworf4i)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; Page 138-139; 206pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New Ehrlichia ruminantium polynucleotides, useful as vaccines for inducing protective immunity, and protecting animals or humans against rickettsial diseases, e.g. typhus, spotted fever or heart water.

Sequences of the invention are useful for inducing immunity, particularly protective immunity. They are also useful for detecting the presence of E. ruminantium in a biological sample. They are useful in vaccines for protecting animals or humans against rickettsial diseases, e.g. typhus, spotted fever or heart water. Sequences of the invention are useful for detecting antibodies to pathogens. The present sequence is a DNA encoding Enrichia ruminantium hypothetical integrase/recombinase (19hworfli)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New Ehrlichia ruminantium polynucleotides, useful as vaccines for inducing protective immunity, and protecting animals or humans against rickettsial diseases, e.g. typhus, spotted fever or heart water.
                                                                                                                                                                                                                                                                                                                                          Sequence 371 BP; 128 A; 74 C; 45 G; 124 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to nucleic acid vaccines for conferring immunity to rickettsial infection, including Ehrlichia ruminantium (formerly Cowdria ruminantium). The invention also relates to novel E.

The invention describes an isolated or recombinant immunogenic polypeptide (I) which comprises, mimics or cross-reacts with a B-cell or T-cell epitope of a Lawsonia spp. polypeptide such as fihB, fliR, ntrC, glnH, motA, motB, tlyC, ytfM or ytfN polypeptides. (I) is useful for identifying whether or not a porcine or avian animal has suffered from a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid (2) a host cell containing the vector; (3) an isolated conciding a polypeptide whose expression is inhibited by the antisense concleic acid; (2) a host cell containing the vector; (3) an isolated collypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway the gene product or that has an activity against a biological pathway correspond to a proliferation, or that inhibits cellular proliferation or the compound that influences the activity of a gene on which a proliferation are required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an operanism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits proliferation of an operanism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits proliferation of an operanism of an organism. The antisense nucleic acids are useful for which each of the strains is present in a culture or collection of compound to activity of the target of a compound that inhibits the extent of the proliferation of an organism. The antisense nucleic acids are useful for cellular proliferation in cells other than S. aureus, S. typhimurium, C. Interest of the printed specification, but was obtained in the target prokaryotic essential genes. Note: The sequence data for this patent did celectronic format directly from WIPO at the carenas obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches 499;

The present method enables highly specific classification of haematopoietic cell proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      lymphocytic leukaemia and acute myelogenous leukaemia; as probes for determining the cytosine methylation state and/or single nucleotide polymorphisms (SNPs) of haematopoietic cell proliferation disorder related sequences and their complements; and as primers for the amplification of haematopoietic cell proliferation disorder related DNA sequences. The nucleotide sequences from the present invention can also be used for detecting a predisposition to, differentiation between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           which distinguishes between methylated and non-methylated CpG dinucleotides within the target nuclecides equences from the present specifically claimed nucleotide sequences from the present invention. Oligonucleotides from the present invention can be used:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes a method for detecting and differentiating between haematopoietic cell proliferative disorders associated with at least 1 gene and/or their regulatory regions in a subject. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least 1 reagent,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 8056 BP; 3711 A; 0 C; 371 G; 3974 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   differentiating between healthy haematopoietic cells and proliferative disorder haematopoietic cells; for differentiating between acute
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      disorders allowing for improved and informed treatment of patients

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoteer operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding antisense nucleic acid; (4) an antibody capable of inhibited.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1029 BP; 395 A; 118 C; 232 G; 284 T; 0 U; 0 Other;

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:
                                                                                                                                                                                                                                                                                                                                                                                                              Staphylococcus haemolyticus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Prokaryotic essential gene #29287.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             19-JUN-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ACA47630

```
CC (1) a vector comprising a promoter operably linked to the nucleic acid CC encoding_a polypeptide whose expression is inhibited by the antisense condition acid; (2) a host cell containing the vector; (3) an isolated completed acid; (2) a host cell containing the vector; (3) an isolated completed or its fragment whose expression is inhibited by the containing completed for its fragment whose expression is inhibited by the containing completed or its fragment whose expression is inhibited by the containing completed for proliferation or the activity of a gene in an operan required for proliferation, (7) identifying a compound that inhibite proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which hat best compound that inhibits proliferation; (8) compound so activity; (11) a culture dependent proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound is a crivity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the contiferation of an organism. The antisense nucleic acids are useful for cellular proliferation to isolate candidate molecules for rational contiferation to isolate candidate molecules for rational continuation to isolate candidate molecules for rational continuation and c

                        The invention relates to novel genes and encoded proteins from Staphylococcus aureus. A composition comprising the S. aureus protein, a nucleic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepsis in a patient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antibiotics. This sequence represents one of
                                                                                                                                                                                                                                                                                                                                                                                                                                    New Staphylococcus aureus protein, useful as a vaccine for treating or preventing Staphylococcal infection, specifically an infection caused S. aureus, e.g. sepsis.
                                                                                                                                                                                                                                                                                                                                                                    Claim 6; SEQ ID NO 5629; 49pp; English.

                                                                                                                                                                               g
                                                                                                                                                                                                                                 The invention relates to antisense inhibitors of genes essential to C prokaryotic cellular proliferation, their use in identifying the genes, and the use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia C coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also cuseful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the express these proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acids sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent cd did not form part of the printed specification, but was obtained in celectronic format directly from WIPO at

Prokaryotic essential gene #9182

```
CC the 6213 antisenses esquences given in the specification where expression CC (1) a vector comprising a promoter operably linked to the nucleic acid inhibits proliferation of a cell. Also included are: CC (1) a vector comprising a promoter operably linked to the nucleic acid concoling a polypeptide whose expression is inhibited by the antisense cC nucleic acid; (2) a host cell containing the vector; (3) an isolated CC antisense nucleic acid; (4) an antibody capable of specifically binding CC polypeptide; (5) producing the polypeptide; (6) inhibiting cellular CC proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway for a gene product or that has an activity against a biological pathway or a gene on which the test compound that influences the biological compound; a activity; (11) a culture compising strains in which the proliferation required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an CC compound; activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of Strains; or (13) identifying the target of a compound that inhibits the extent compound that inhibits proliferation of an organism. The antisense nucleic acids are useful for cellular proliferation to isolate candidate molecules for rational content of the proliferation to isolate candidate molecules for rational content discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, CC prokaryotic essential genes. Note: The sequence data for this patent did content of the printed specification, but was obtained in the target prokaryotic essential genes. Note: The sequence data for this patent did cells only in the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     21-MAR-2001; 2001Us-00948993.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of biosynthetic products, e.g. enzymes. Borrelia belongs to a family of motile, spiral-shaped bacteria called Spirochetes. Spirochetes are pathogenic in humans and Borrelia causes epidemic and endemic relapsing fever, and Lyme borreliosis, more commonly known as Lyme disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             5248
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              3839
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  5074
```

The invention relates to an isolated nucleic acid comprising any one the 6213 antisense sequences given in the specification where express

0f

```
of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid
cencoding a polypeptide whose expression is inhibited by the antisense
concluded acid; (2) a host cell containing the vector; (3) an isolated
containing the polypeptide; (6) inhibited by the
containing the polypeptide; (6) inhibited by the
containing the polypeptide; (6) inhibited by the
containing the polypeptide; (6) inhibiting cellular
containing the polypeptide; (6) inhibiting cellular
containing the gene in an operon required for
containing a gene activity of a gene in an operon required for
containing a gene required for cellular proliferation or the biological
pathway in which a proliferation-required gene or its gene product lies
or a gene on which the test compound that inhibits proliferation of an
compound's activity; (11) a culture comprising strains in which the gene
product is overexpressed or underexpressed; (12) determining the extent
to which each of the strains is present in a culture or collection of
strains; or (13) identifying the target of a compound that inhibits the
containing proteins or screening for homologous nucleic acids are useful for
containing proteins or screening for homologous nucleic acids required
containing the target of a compound that inhibits the
containing proteins or screening for homologous nucleic acids required
containing to proliferation to isolate candidate molecules for rational
containing the proliferation to screening homologous nucleic acids
containing to proliferation and cells other than S. aureus, S. typhimurium,
containing the proliferation for screening homologous proless acids required
containing the proliferation to isolate candidate molecules for rational
containing the proliferation to isolate candidate molecules for this patent did
containing the prolifer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

The present invention describes a method for detecting and differentiating between haematopoietic cell proliferative of

disorders

Claim 28; SEQ ID NO 386; 117pp; English.

Detecting and differentiating between hematopoietic cell proliferative disorders, comprises contacting a target nucleic acid with a reagent tidistinguishes between methylated and non-methylated CpG dinucleotides.

a reagent that

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           determining the cytosine methylation state and/or single nucleotide polymorphisms (SNPs) of haematopoietic cell proliferation disorder related sequences and their complements; and as primers for the amplification of haematopoietic cell proliferation disorder related DNA sequences. The nucleotide sequences from the present invention can also be used for detecting a predisposition to, differentiation between subclasses, diagnosis, prognosis, treatment and/or monitoring of haematopoietic cell proliferative disorders. The present method enables highly specific classification of haematopoietic cell proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   differentiating between healthy haematopoietic cells and proliferative disorder haematopoietic cells; for differentiating between acute disorder haematopoietic cells; for differentiating between acute lymphocytic leukaemia and acute myelogenous leukaemia; as probes for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               which distinguishes between methylated and non-methylated CpG dinucleotides within the target nucleic acid. ABZ09861 to ABZ11118 represent specifically claimed nucleotide sequences from the present invention. Oligonucleotides from the present invention can be used:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               associated with at least 1 gene and/or their regulatory regions in a subject. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least 1 reagent,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 8056 BP; 3711 A; 0 C; 371 G; 3974 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       disorders allowing for improved and informed treatment of patients
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Local Similarity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to isolated Acinetobacter baumannii nucleic acids. The A. baumannii nucleic acids and polypeptides are useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, to detect the presence of a baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1557 BP; 481 A; 321 C; 330 G; 425 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            plants. The present sequence represents DNA encoding an A. baumannii
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example; SEQ ID NO 3206; 328pp; English.

New nucleic acid fragments from chemically treated angiogenesis-associated genes, useful for determining methylation status, e.g. in

bases of chemically pretreated DNA of angiogenesis-associated genes (I) having sequences (ABQ66971-ABQ67178) or their complements. (I), also related oligomers, are used to evaluate the methylation status and/or single-nucleotide polymorphisms, in angiogenesis-related genes, for diagnosis and treatment of eye diseases, proliferative retinopathy, neovascular glaucoma, solid tumours, inflammation, rheumatoid arthritis, diabetic retinopathy, macular degeneration caused by neovascularisation, psoriasis, arteriosclerosis, inflammatory bowel diseases, ulcers and Crohn's disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences The invention relates to a nucleic acid (I) comprising a segment of 18

Sequence 83391 BP; 25113 A; 665 C; 16761 G; 40835 T; 0 U; 17 Other;

CC The invention relates to a nucleic acid comprising a sequence of 18 CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with CP blaulphite, of genes associated with tumour suppression and oncogenes CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and C500 are missing from the sequence listing) sequences (SS) and sequences (CC complementary to (SS). The nucleic acid may be a peptide nucleic acid—CC probes for detecting the cyrosine methylation state and/or single—CC nucleotide polymorphisms and also to be used in an array for analysing CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The probes can also be used in a method for ascertaining genetic and/or cpjgenetic parameters for the diagnosis and/or therapy of existing CC diseases or the predisposition to specific diseases, by analysing CC diseases or the predisposition to specific diseases, by analysing CC genetic and/or epigenetic parameters may be compared to another set of genetic and/or prognosis events which are disadvantageous to CC cyrosine methylations. The parameters may be compared to another set of genetic and/or prognosis events which are disadvantageous to CC partents. The present sequence is one of the S3 genomic sequences can incorrect Seq ID numbers are the complementary sequence of the CC corresponding odd numbered sequence (e.g. ID 2 and ID1, ID 536 and ID CS 135, except for those whose partner sequence is missing). Note: The S9 sequence data for this patent did not form part of the printed CC sequence data for this patent did not form part of the printed CC sequence data for this patent did not form part of the printed CC sequence at the complementary sequence of the S9 sequence at the printed CC sequence at the printed S9 sequence at the p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches 945;

of the nucleic acid inhibits proliferation of a cell. Also included are:

(C (1) a vector comprising a promoter operably linked to the nucleic acid
ce encoding a polypeptide whose expression is inhibited by the antisense
culsic acid; (2) a host cell containing the vector; (3) an isolated
cpolypeptide or its fragment whose expression is inhibited by the
cardi; (4) an antibody capable of specifically binding
ct proliferation or the activity of agne in an operon required for
cproliferation; (7) identifying a compound that influences the activity of
the gene product or that has an activity against a biological pathway
cy required for proliferation, or that inhibits cellular proliferation or the biological
pathway in which a proliferation-required gene or its gene product lies
cy a gene on which the test compound that inhibits proliferation of an
compound's activity; (11) a culture comprising strains in which the gene
cy roduct is overexpressed or underexpressed; (2) manufacturing an antibiotic; (10) profiling a
compound's activity; (11) a culture comprising strains in which the gene
cy roduct is overexpressed or underexpressed; (2) determining the extent
cy for cellular proliferation in cells of a compound that inhibits the
cy roliferation of an organism. The antisense nucleic acids are useful for
cy identifying proteins or screening for homologous nucleic acids are useful for
cy collilar proliferation in cells other than S. aureus, S. typhimurium,
cy proliferation for life streetly from WIPO at

The invention relates to an isolated nucleic acid derived from Enterococcus faecium encoding an Enterococcus faecium polypeptide having one of 10 fully defined sequences given in the (or comprising 40 sequential nucleotides chosen from any of the nucleic acids, its complement or sequences hybridising to it. Also included are a recombinant vector comprising the nucleic acid operably linked to transcription regulatory element, a cell comprising the vector and a single-stranded probe comprising the nucleic acid. The nucleic acids are chosen from 3654 disclosed sequences encoding 3654 disclosed proteins. The nucleic acids is useful for diagnosing pathological conditions resulting from E. faecium bacterial infection (e.g. urinary tract infection) and for screening decorations, wounds and abdominal-pelvic references and conditions and sequences and a sequences are consistent and actions are consistent and actions and actions are consistent and actions are sequenced.
infection) and for screening drugs such as agonists and antagonists. The nucleic acid is useful for recombinant production of Candida albicans derived peptides or antisense polypeptides. Pharmaceutical compositions and vaccines containing the nucleic acid are useful for preventing or treating Enterococcus faecium infections. The present sequence represent one if the disclosed E. faecium nucleic acids.
                                                                                         The present sequence represents
